

BritishRedCross Summary impact of CV-19: diverse communities

This document is designed to help you to identify how your thinking, planning and decision-making work (in relation to Covid-19) has a potential negative impact upon certain groups of people.

(e.g. disabled, ethnic minorities in terms of reach or response)

This is NOT an exhaustive list, but a helpful prompt to consider wider impact.

'	
Ago	Parameters: RISK: failing to appreciate the inequality of impact CV-19 has on age ranges
Age	> Older people (70+) more likely to be at clinical risk & at risk of fatality
_	 Younger people disproportionately affected by economic fallout (e.g. job security)
	> Younger people's mental health appears greater effected
	> Elderly more likely to be affected by loneliness in isolation (half over 75 living alone)
	> Unknown scale of impact upon elderly Individuals living in care homes
	> Economic downturn resulting in decreased retirement affordability
	> Multi-generational households (ethnicity/religion) are more likely to be at risk
	> Elderly people more likely to have a disability as well as being clinically at risk RISK: failing to appreciate the inequality of impact CV-19 has on disabled people.
Disability	Re kisk. Talling to appreciate the inequality of impact cv-17 has on alsabled people.
2.00.2,	> Disabled people more likely to be at clinical risk (particularly these groups)
	 Likely to be isolated for longer, with impact upon mental health
	> Difficulty social distancing / existing treatment appointments (increased risk exposure)
	> Fast paced/inaccessible communications creating a disparity of understanding
	> Lack of adequate technology to seek support & connection during isolation
	> Inadequate home-office set-up & reduced participation in work/conferencing
	> Reducing numbers of support-workers to disabled people
	 Cancelled medical appointments disproportionate impact on disability Complex new systems (food delivery) impacting ability to isolate/shield
	 Deaf individuals unable to communicate with facemask
	> Implications for blind people in social distancing
Gender	> Risk that gender affirming healthcare deemed 'non-essential' & Possible postponement
Reassignment	of gender recognition acts in Scotland (potential mental health impact)
Marriage or	> Impact upon planned celebrations, weddings & other events impacting wellbeing
Civil	> Recognising households with one adult may be more isolated
	 Recognising households with one adult may be more isolated Individuals living in shared accommodation may not have space to work remotely
Civil Partnership	 Recognising households with one adult may be more isolated Individuals living in shared accommodation may not have space to work remotely Pregnant people advised to isolate, which may impact upon mental health
Civil Partnership Pregnancy	 Recognising households with one adult may be more isolated Individuals living in shared accommodation may not have space to work remotely Pregnant people advised to isolate, which may impact upon mental health Risk of failing to communicate with/include people on maternity/other leave
Civil Partnership	 Recognising households with one adult may be more isolated Individuals living in shared accommodation may not have space to work remotely Pregnant people advised to isolate, which may impact upon mental health Risk of failing to communicate with/include people on maternity/other leave Impact of CV-19 on people with childcare responsibilities during WFH (custodial visits, co-
Civil Partnership Pregnancy	 Recognising households with one adult may be more isolated Individuals living in shared accommodation may not have space to work remotely Pregnant people advised to isolate, which may impact upon mental health Risk of failing to communicate with/include people on maternity/other leave Impact of CV-19 on people with childcare responsibilities during WFH (custodial visits, coparenting at distance)
Civil Partnership Pregnancy	 Recognising households with one adult may be more isolated Individuals living in shared accommodation may not have space to work remotely Pregnant people advised to isolate, which may impact upon mental health Risk of failing to communicate with/include people on maternity/other leave Impact of CV-19 on people with childcare responsibilities during WFH (custodial visits, coparenting at distance) Impact upon adoption/fostering processes (delay) and mental health implications
Civil Partnership Pregnancy	 Recognising households with one adult may be more isolated Individuals living in shared accommodation may not have space to work remotely Pregnant people advised to isolate, which may impact upon mental health Risk of failing to communicate with/include people on maternity/other leave Impact of CV-19 on people with childcare responsibilities during WFH (custodial visits, coparenting at distance)
Civil Partnership Pregnancy or Maternity	 Recognising households with one adult may be more isolated Individuals living in shared accommodation may not have space to work remotely Pregnant people advised to isolate, which may impact upon mental health Risk of failing to communicate with/include people on maternity/other leave Impact of CV-19 on people with childcare responsibilities during WFH (custodial visits, coparenting at distance) Impact upon adoption/fostering processes (delay) and mental health implications
Civil Partnership Pregnancy or Maternity	 Recognising households with one adult may be more isolated Individuals living in shared accommodation may not have space to work remotely Pregnant people advised to isolate, which may impact upon mental health Risk of failing to communicate with/include people on maternity/other leave Impact of CV-19 on people with childcare responsibilities during WFH (custodial visits, coparenting at distance) Impact upon adoption/fostering processes (delay) and mental health implications RISK: failing to appreciate the inequality of impact CV-19 has on ethnic minorities.
Civil Partnership Pregnancy or Maternity	 Recognising households with one adult may be more isolated Individuals living in shared accommodation may not have space to work remotely Pregnant people advised to isolate, which may impact upon mental health Risk of failing to communicate with/include people on maternity/other leave Impact of CV-19 on people with childcare responsibilities during WFH (custodial visits, coparenting at distance) Impact upon adoption/fostering processes (delay) and mental health implications RISK: failing to appreciate the inequality of impact CV-19 has on ethnic minorities. Ethnic minorities comprise a disproportionate number of CV-19 cases & fatalities BAME people possibly increased clinical vulnerability (higher rates of hypertension and diabetes)
Civil Partnership Pregnancy or Maternity	 Recognising households with one adult may be more isolated Individuals living in shared accommodation may not have space to work remotely Pregnant people advised to isolate, which may impact upon mental health Risk of failing to communicate with/include people on maternity/other leave Impact of CV-19 on people with childcare responsibilities during WFH (custodial visits, coparenting at distance) Impact upon adoption/fostering processes (delay) and mental health implications RISK: failing to appreciate the inequality of impact CV-19 has on ethnic minorities. Ethnic minorities comprise a disproportionate number of CV-19 cases & fatalities BAME people possibly increased clinical vulnerability (higher rates of hypertension and diabetes) Ethnic minorities more likely to be essential-workers (high-representation in healthcare)
Civil Partnership Pregnancy or Maternity	 Recognising households with one adult may be more isolated Individuals living in shared accommodation may not have space to work remotely Pregnant people advised to isolate, which may impact upon mental health Risk of failing to communicate with/include people on maternity/other leave Impact of CV-19 on people with childcare responsibilities during WFH (custodial visits, coparenting at distance) Impact upon adoption/fostering processes (delay) and mental health implications RISK: failing to appreciate the inequality of impact CV-19 has on ethnic minorities. Ethnic minorities comprise a disproportionate number of CV-19 cases & fatalities BAME people possibly increased clinical vulnerability (higher rates of hypertension and diabetes) Ethnic minorities more likely to be essential-workers (high-representation in healthcare) BAME millennials more likely to be strongly adversely economically impacted
Civil Partnership Pregnancy or Maternity	 Recognising households with one adult may be more isolated Individuals living in shared accommodation may not have space to work remotely Pregnant people advised to isolate, which may impact upon mental health Risk of failing to communicate with/include people on maternity/other leave Impact of CV-19 on people with childcare responsibilities during WFH (custodial visits, coparenting at distance) Impact upon adoption/fostering processes (delay) and mental health implications RISK: failing to appreciate the inequality of impact CV-19 has on ethnic minorities. Ethnic minorities comprise a disproportionate number of CV-19 cases & fatalities BAME people possibly increased clinical vulnerability (higher rates of hypertension and diabetes) Ethnic minorities more likely to be essential-workers (high-representation in healthcare) BAME millennials more likely to be strongly adversely economically impacted Lack of specific action, plans, communication, to address this inequality
Civil Partnership Pregnancy or Maternity	 Recognising households with one adult may be more isolated Individuals living in shared accommodation may not have space to work remotely Pregnant people advised to isolate, which may impact upon mental health Risk of failing to communicate with/include people on maternity/other leave Impact of CV-19 on people with childcare responsibilities during WFH (custodial visits, coparenting at distance) Impact upon adoption/fostering processes (delay) and mental health implications RISK: failing to appreciate the inequality of impact CV-19 has on ethnic minorities. Ethnic minorities comprise a disproportionate number of CV-19 cases & fatalities BAME people possibly increased clinical vulnerability (higher rates of hypertension and diabetes) Ethnic minorities more likely to be essential-workers (high-representation in healthcare) BAME millennials more likely to be strongly adversely economically impacted Lack of specific action, plans, communication, to address this inequality Risk of fuelling existing disparities of health and economic status
Civil Partnership Pregnancy or Maternity	 Recognising households with one adult may be more isolated Individuals living in shared accommodation may not have space to work remotely Pregnant people advised to isolate, which may impact upon mental health Risk of failing to communicate with/include people on maternity/other leave Impact of CV-19 on people with childcare responsibilities during WFH (custodial visits, coparenting at distance) Impact upon adoption/fostering processes (delay) and mental health implications RISK: failing to appreciate the inequality of impact CV-19 has on ethnic minorities. Ethnic minorities comprise a disproportionate number of CV-19 cases & fatalities BAME people possibly increased clinical vulnerability (higher rates of hypertension and diabetes) Ethnic minorities more likely to be essential-workers (high-representation in healthcare) BAME millennials more likely to be strongly adversely economically impacted Lack of specific action, plans, communication, to address this inequality Risk of fuelling existing disparities of health and economic status Risk of stigmatisation of certain races (e.g. comments about 'Chinese virus')
Civil Partnership Pregnancy or Maternity	 Recognising households with one adult may be more isolated Individuals living in shared accommodation may not have space to work remotely Pregnant people advised to isolate, which may impact upon mental health Risk of failing to communicate with/include people on maternity/other leave Impact of CV-19 on people with childcare responsibilities during WFH (custodial visits, coparenting at distance) Impact upon adoption/fostering processes (delay) and mental health implications RISK: failing to appreciate the inequality of impact CV-19 has on ethnic minorities. Ethnic minorities comprise a disproportionate number of CV-19 cases & fatalities BAME people possibly increased clinical vulnerability (higher rates of hypertension and diabetes) Ethnic minorities more likely to be essential-workers (high-representation in healthcare) BAME millennials more likely to be strongly adversely economically impacted Lack of specific action, plans, communication, to address this inequality Risk of fuelling existing disparities of health and economic status
Civil Partnership Pregnancy or Maternity	 Recognising households with one adult may be more isolated Individuals living in shared accommodation may not have space to work remotely Pregnant people advised to isolate, which may impact upon mental health Risk of failing to communicate with/include people on maternity/other leave Impact of CV-19 on people with childcare responsibilities during WFH (custodial visits, coparenting at distance) Impact upon adoption/fostering processes (delay) and mental health implications RISK: failing to appreciate the inequality of impact CV-19 has on ethnic minorities. Ethnic minorities comprise a disproportionate number of CV-19 cases & fatalities BAME people possibly increased clinical vulnerability (higher rates of hypertension and diabetes) Ethnic minorities more likely to be essential-workers (high-representation in healthcare) BAME millennials more likely to be strongly adversely economically impacted Lack of specific action, plans, communication, to address this inequality Risk of fuelling existing disparities of health and economic status Risk of stigmatisation of certain races (e.g. comments about 'Chinese virus') Refugees & Asylum Seekers having less-support during CV-19 response
Civil Partnership Pregnancy or Maternity	 Recognising households with one adult may be more isolated Individuals living in shared accommodation may not have space to work remotely Pregnant people advised to isolate, which may impact upon mental health Risk of failing to communicate with/include people on maternity/other leave Impact of CV-19 on people with childcare responsibilities during WFH (custodial visits, coparenting at distance) Impact upon adoption/fostering processes (delay) and mental health implications RISK: failing to appreciate the inequality of impact CV-19 has on ethnic minorities. Ethnic minorities comprise a disproportionate number of CV-19 cases & fatalities BAME people possibly increased clinical vulnerability (higher rates of hypertension and diabetes) Ethnic minorities more likely to be essential-workers (high-representation in healthcare) BAME millennials more likely to be strongly adversely economically impacted Lack of specific action, plans, communication, to address this inequality Risk of fuelling existing disparities of health and economic status Risk of stigmatisation of certain races (e.g. comments about 'Chinese virus') Refugees & Asylum Seekers having less-support during CV-19 response Ethnic minorities more likely to have extended caring responsibilities Unknown overall cause for disparity (socio-economic inequalities) Ethnic minorities tend to live in largest cities – BRC can be targeted in response
Civil Partnership Pregnancy or Maternity	 Recognising households with one adult may be more isolated Individuals living in shared accommodation may not have space to work remotely Pregnant people advised to isolate, which may impact upon mental health Risk of failing to communicate with/include people on maternity/other leave Impact of CV-19 on people with childcare responsibilities during WFH (custodial visits, coparenting at distance) Impact upon adoption/fostering processes (delay) and mental health implications RISK: failing to appreciate the inequality of impact CV-19 has on ethnic minorities. Ethnic minorities comprise a disproportionate number of CV-19 cases & fatalities BAME people possibly increased clinical vulnerability (higher rates of hypertension and diabetes) Ethnic minorities more likely to be essential-workers (high-representation in healthcare) BAME millennials more likely to be strongly adversely economically impacted Lack of specific action, plans, communication, to address this inequality Risk of fuelling existing disparities of health and economic status Risk of stigmatisation of certain races (e.g. comments about 'Chinese virus') Refugees & Asylum Seekers having less-support during CV-19 response Ethnic minorities more likely to have extended caring responsibilities Unknown overall cause for disparity (socio-economic inequalities) Ethnic minorities tend to live in largest cities – BRC can be targeted in response Sensitivity to disproportionate loss of friends, family and community (BAME)
Civil Partnership Pregnancy or Maternity	 Recognising households with one adult may be more isolated Individuals living in shared accommodation may not have space to work remotely Pregnant people advised to isolate, which may impact upon mental health Risk of failing to communicate with/include people on maternity/other leave Impact of CV-19 on people with childcare responsibilities during WFH (custodial visits, coparenting at distance) Impact upon adoption/fostering processes (delay) and mental health implications RISK: failing to appreciate the inequality of impact CV-19 has on ethnic minorities. Ethnic minorities comprise a disproportionate number of CV-19 cases & fatalities BAME people possibly increased clinical vulnerability (higher rates of hypertension and diabetes) Ethnic minorities more likely to be essential-workers (high-representation in healthcare) BAME millennials more likely to be strongly adversely economically impacted Lack of specific action, plans, communication, to address this inequality Risk of fuelling existing disparities of health and economic status Risk of stigmatisation of certain races (e.g. comments about 'Chinese virus') Refugees & Asylum Seekers having less-support during CV-19 response Ethnic minorities more likely to have extended caring responsibilities Unknown overall cause for disparity (socio-economic inequalities) Ethnic minorities tend to live in largest cities – BRC can be targeted in response Sensitivity to disproportionate loss of friends, family and community (BAME) BAME people more likely to live in multi-generational homes
Civil Partnership Pregnancy or Maternity	 Recognising households with one adult may be more isolated Individuals living in shared accommodation may not have space to work remotely Pregnant people advised to isolate, which may impact upon mental health Risk of failing to communicate with/include people on maternity/other leave Impact of CV-19 on people with childcare responsibilities during WFH (custodial visits, coparenting at distance) Impact upon adoption/fostering processes (delay) and mental health implications RISK: failing to appreciate the inequality of impact CV-19 has on ethnic minorities. Ethnic minorities comprise a disproportionate number of CV-19 cases & fatalities BAME people possibly increased clinical vulnerability (higher rates of hypertension and diabetes) Ethnic minorities more likely to be essential-workers (high-representation in healthcare) BAME millennials more likely to be strongly adversely economically impacted Lack of specific action, plans, communication, to address this inequality Risk of fuelling existing disparities of health and economic status Risk of stigmatisation of certain races (e.g. comments about 'Chinese virus') Refugees & Asylum Seekers having less-support during CV-19 response Ethnic minorities more likely to have extended caring responsibilities Unknown overall cause for disparity (socio-economic inequalities) Ethnic minorities tend to live in largest cities – BRC can be targeted in response Sensitivity to disproportionate loss of friends, family and community (BAME)

Religion or Belief Sex	 Beliefs relating to medical treatment & funeral practices impacted Impact upon people observing religious events (Ramadan) Closure of religious buildings causing anxiety and loss of support networks Potential reduced availability of certain foods (e.g. Halal, Vegan) Impact upon facial hair (religion) and facemasks required RISK: failing to appreciate the inequality of impact CV-19 has on men Men are at greater clinical risk from CV-19 Isolation and social distancing impact upon increasing rates of domestic abuse Childcare responsibilities (closure of schools) may lead to disparity of working women with caring responsibilities Caring responsibilities for elderly and disabled or shielded people can result in increased burden on ethnic minorities & women Women more likely to work in high-exposure roles to CV-19 Women more likely to be in service/retail roles and suffer negative financial impact Possible impact upon medication collection (contraception) Some PPE not being designed for women's bodies (safety & comfort)
Sexual Orientation	 LGB+ people more likely experience a socio-economic inequality (e.g. job-security, homelessness, subsequent increased risk of COVID-19) Risks of forced isolation with hostile or unaccepting household
Socio- Economic	 Remote working and access to technology not possible for many Key worker status linked to specific groups of people (age, sex) Low paid staff are less likely to afford basics (buy what is left on the shelf) Homeless individuals are likely to be at greater clinical risk (& social risk if isolated away from support networks)
Other considerations	> (Geography) The <u>Vulnerability Index</u> shows coastal regions of England, North-east England and Southern counties of Northern Ireland at greatest risk from CV-19. The rural areas are less likely to have community support.

Once you have identified any negative impact, think about what action you can take to reduce/eliminate this e.g.;

- > Targeted approach to reach specific groups
- > Plan **communications** accessible to disabilities, ethnicities and ages.
- > Alternative options for those unable to access offer/service through main route
- > Integrate this into wider guidance, process or policy as appropriate
- > Consider integrating this into your **evaluations**
- > Escalating instances where negative impact cannot be reasonably mitigated
- > Be prepared to **find out more**, ask for help if you need it

For a more inclusive approach, you can consult these resources
